ABOUT | Kelly Green

Serving the Chico area since 1989

Owner Paul Kelly received his Bachelor of Science in Horticulture from Colorado State University. His in-depth knowledge of plant biology and North State climate and soil conditions enable him and his staff of professionals to provide the most advanced care and maintenance for your lawn, trees and plants all year long.

Our safe, effective seasonal treatments are designed to efficiently control unwanted pests, weeds, and fungus, and to provide the proper nutrients necessary to maintain healthy landscaping.

Kelly Green cares about the health of your family. Our state-of-the-art equipment is specifically calibrated to deliver the best results while maintaining rigorous environmental safety standards. We use the highest quality products, and our services are environmentally responsible, pet-friendly and safe for your children.

PREMIUM SERVICES | Kelly Green

LAWN CARE PROGRAM

- Fertilization (6 times per year, Feb.–Nov.)
- Pre-emergent Application
- Weed Control
- Insecticide
- Fungicides (only as needed or requested)

TREE INJECTIONS (mid Dec.–Jan. 31st)

SHRUB AND PLANT MANAGEMENT SPRING AND FALL

- Pre-emergent Application
- Weed Control
- Special Fertilizer

LAWN AERATION

Lawn aeration improves the quality of your lawn by giving grass roots greater access to oxygen and nutrients. Better quality soil then encourages microorganisms that help decompose thatch and lawn clippings, redistributing additional nutrients into the soil to improve the root systems of the grass. Aeration also improves the absorption of water and reduces run-off so that watering is more efficient.

OPEN FIELD CONTROL

Star thistle is an invasive weed that quickly overtakes pastures, affecting wildlife, grazing and recreation. Due to a deep root system and prolific seeds, star thistle is difficult to eradicate without a persistent, professional weed control program over several years, such as **Milestone**.

CLIENT QUARTERLY NEWSLETTER

Our informative newsletter contains facts and advice for our clients on the care of their landscaping and on various horticultural practices.

We are currently testing organic insecticides and fungicides and will publish results in the newsletter.

SEASONAL CARE | Kelly Green

Regular Lawn care keeps your lawn green, healthy and sturdy; improves water efficiency and grass texture; and increases the turf density for fewer brown spots. **Our goals are to build a stronger, deeper root system and work with each customer to reduce unnecessary treatments.** Our annual Lawn Care Program includes:

- Fertilization
- Pre-emergent Application
- Weed Control
- Insecticide
- Fungicide

Environmentally Safe Tree Injections protect trees from the inside and out. **Merit** is precisely injected into the soil surrounding a tree and then absorbed into the tree's root system. **Merit** is especially effective on **rose, crape myrtle, maple, tulip** and **oak trees**. Seasonal treatments promote healthy blooms and provide year-round control of pests such as aphids, which produce honeydew, a sticky substance that can damage property under infected trees and attract ants and other unwanted bugs.

Shrub and Plant Management helps your landscaping stay beautiful and not become overrun with weeds. Spring and fall sprayings can dramatically reduce weed occurrence. Our selective herbicides will not kill shrubs and flowers; they are safe for children and animals. Shrub and plant management includes:

- Pre-emergent Application
- Weed Control
- Special Fertilizer
